Dear Yash Wairagade ,

I hope this email finds you well!

Thank you for your interest in the **DevOps Engineer** role at **8Byte.ai**. We enjoyed learning more about your background through your application and are excited to move to the next stage.

As the next step, we would like to invite you to the **Technical Assignment** round. This comprehensive task is designed to evaluate your hands-on ability to provision infrastructure, automate deployments, and implement robust monitoring—skills essential for end-to-end ownership at our startup.

Assignment Overview

The assignment is divided into four key parts:

- **Part 1: Infrastructure Provisioning:** Use Terraform to provision a VPC, RDS (PostgreSQL), and application hosting (EC2/ECS/EKS) on AWS.
- **Part 2: Deployment Automation:** Create CI/CD pipelines (GitHub Actions/GitLab/Jenkins) including test suites, Docker image handling, and staging/production deployment logic.
- **Part 3: Monitoring & Logging:** Set up centralized logging and infrastructure/application metrics with at least two dashboards.
- **Part 4: Documentation:** Provide a README explaining setup, architectural decisions, and security considerations.

Timeline: 3 Days **Estimated Effort:** 9–12 hours

Submission Guidelines

Please reply to this email with the following:

GitHub Repository Link: Containing all code and configuration files.

Approach Documentation: A clear README within the repo.

Challenges Document: A PDF or Word doc detailing challenges faced and your resolutions.

Loom Video: A brief recording explaining your code and demonstrating the running environment.

Interview Process

- **R1:** Technical Assignment (You are here)
- **R2:** Technical Interview Round (Live code demo)
- **R3:** Interview with DevOps Lead
- **R4:** Interview with Hiring Manager
- **R5:** CTO Round
- **R6:** Employee Benefits and Compensation Discussion

Important Instructions

- **Logic:** Application logic is not the priority; you may use any ready-made project.
- **Originality:** Do not use AI to write the code; we have methodologies to verify original work.
- **Best Practices:** We encourage you to note "happy paths" first and highlight good practices to differentiate your approach.

Thank you once again for your interest in **8Byte.ai**. We look forward to seeing your solution!

Best Regards,

HR Team
